

Rolling Code RF Remote Controller

HT68F03T3

Characteristics

- Operating voltage : 2.2V ~ 3.6V
- Flash Program Memory
- Integrated EEPROM permits the storage of relevant application data such as calibration data, manufacturing parameters, etc.
- Supports 4 keys -- using a key matrix, can support up to 12 keys
- RF transmission frequency : 300MHz ~ 450MHz
- Only required to add a crystal reference frequency and a limited number of external components to create a complete and versatile RF transmitter system
- Supports ICP

Flash type MCU with integrated EEPROM and RF Transmitter

Application Areas

Motorcycle, Car, wireless Remote applications

Application Circuit
